

THE STONE COIN (STO) is a serious and future-oriented payment token that is entering the market with an effective REAL SHIELD.

EFFECTIVE REAL SHIELD

The net funds raised by the emission will be invested in the development of a substantial European real estate portfolio. Hereby the STONE COIN is not backed up by real estate, but it has an effective REAL SHIELD that permanently ensures the system and the network of acceptance points.

PARTICIPATION IN THE CHART-DEVELOPMENT

The listing of the STONE COIN on relevant crypto exchanges offers the token owners the opportunity to participate in the market development and performance development (chart development) of the STONE COIN. And it gives STONE COIN owners a liquidity option on short notice by selling the STONE COIN.

TRANSPARENCY

The build-up of the real estate portfolio, which starts immediately after the end of the PRE-ICO-period, will be permanently documented on the homepage of the THE STONE COIN AG. This gives a direct and always current view at the development and the extent of the REAL SHIELD.

2022 - THE IPO OF THE STONE COIN AG

With the real estate investments completed, in 2022 the THE STONE COIN AG will do an IPO of its shares. FIAT currencies and -as long as the relevant legal regulations will allow it- payment tokens will be accepted. Then the token owners can use their STONE COIN to directly participate in the real estate portfolio.

PERMANENT GROWING REAL SHIELD

All of the net earnings from the real estate investments will be retained and re-invested. Thus the THE STONE COIN AG can guarantee the ongoing normal operation of its real estate investments and the future growth of the REAL SHIELD.

OPTION PHYSICAL OFFLINE WALLET

When directly ordered from THE STONE COIN AG, STONE COIN can be transferred to an online wallet defined by the buyer as well as obtained in a physical wallet - the STONE COIN WALLET. The STONE COIN WALLET is an uncomplicated offline wallet with the option to store the STONE COIN offline.

PAYMENT TOKEN & POINTS OF ACCEPTANCE

The STONE COIN is a blockchain-based payment token (ERC20). To provide a maximum number of acceptance points for the STONE COIN, we employ our especially tasked team and work together with various App designers as well as POS networks. The growing REAL SHIELD will guarantee continuity of our acceptance-point-network.

LEGALLY COMPLIANT

THE STONE COIN AG complies with all the relevant legal requirements of Liechtenstein and Switzerland as well as with the KYC principle. The STONE COIN is neither a security token nor an asset (backed) token. The regulator (FMA) classifies the STONE COIN as a pure payment token which doesn't require a formal approval.

FIXED NUMBER OF TOKENS

The number of STONE COIN to be issued is fixed at one billion tokens. There will be no further mining beyond the original one billion tokens. All tokens will be introduced into the market. This ensures that the value of the REAL SHIELD will not be diluted by a later increase of the total amount of tokens.

PROFESSIONAL MANAGEMENT

The experienced international team of reputable crypto, financial and real estate experts ensures a substantiated and professional management. All participating experts have long and outstanding experiences and successes in their field.
